This dictionary is based upon the original KJV dictionary of Liddel and Scott.

Additionally, it has been augmented with material from Liddel-Scott Greek to English and a variety of other sources, to make it a very useful tool in the study of the English language. The appendix offers a full listing of the words and their meanings, providing a variety of ways to search for the definition or usage. The dictionary can be searched alphabetically, by title, or by the most

common word in a verse. The dictionary contains over 15,000 words, and over 15,000 Greek and English entries, including detailed inflectional information and frequency counts. There are also numerous abbreviations and cross references. The application is compatible with Android 2.1 and later and with iOS 4.3 and later. The full dictionary can be viewed as a list of words arranged alphabetically. Further information such as the number of occurrences of each word in a verse, or the words needed to form a citation can be displayed as you view. Words are displayed in the order they occur in the Greek text of the Bible or in the English text of the Bible as well as in the order in which they are displayed alphabetically. Additional information about each word, including

definitions and frequency counts, can be displayed as you read from left to right or from right to left. Other available options include frequency counts for selected groups of words, alphabetization by frequency of individual words, an alphabetical list of words, and sound/spelling, and frequency lists for selected categories of words. The dictionary can be used as a study or reference tool in individual terms, an entire verse, a passage in a book, or even the entire Bible. The application can be used for personal and research use or for commercial use. The dictionary can be used offline, and downloaded again when you need more words. The following are sample uses of this application: - One-time search for one or more words, the order of which is arbitrary

and not necessarily the order of occurrence in the text - Dictionary searching by word or by word part - Reading the Bible - Popular words, verbs, adjectives, etc. can be sorted by frequency

Word Frequencies: The database contains over 15,000 word groups and more than 15,000 unique words, as a result of various natural language data sources including the Liddel and Scott
