Assessment Binet Kamat Test Of Intelligence Ppt BNTYBK TEST OF INTELLIGENCE 30daysHMS Tamar (1787) HMS Tamar was a 54-gun fourth rate ship of the Royal Navy. She was previously the French Navy's Le Tonnant and the privateer Quedah. French service In 1787, the French Navy purchased Quedah from William King. She was the former British 6-gun brig that had been captured in 1781 and sold to the French in 1786. On 4 July 1787, the navy took over Quedah. Tamar was commissioned in the navy under the command of Lieutenant de Vaisseau de Foissac. Between 1787 and 1791, Tamar patrolled the English Channel, guarding against the threat of a British naval attack. In 1790, she came close to sinking off the coast of Portugal when a deep gash on her side was filled with water. She was recommissioned as a privateer around 1804. On 12 September 1804, she took a small merchant ship. On 4 November, she captured a French ship of the line off Algiers. British service Tamar was rated as a sloop until 1808, and a brig in 1809. She was still being fitted for a sixth rate in 1810. She was involved in the capture of the French privateer brig Vengeur of Clisson on 22 July. She was recommissioned under Commander Martin Jerrard Dalby in 1810.

Field of the Invention This invention generally relates to a replacement cap for the open end of a plastic bag, and more particularly to a bag having an integrally formed strap which can be placed over the top of the bag so as to provide an "attached top" style of bag. The strap is then secured to the bag to maintain the top of the bag open. 2. Description of the Prior Art It is known that plastic bags for many applications are made in a continuous fashion and include an open end and a top end that is closed. In many applications, it is desirable to have the top end of the bag remain open so that the user can insert the contents of the bag into the bag. However, in a number of applications, it is desirable to have the top end of the bag remain closed so that the contents of the bag are better able to be contained within the bag and in particular, to be more securely contained within the bag. Regardless of the specific application of the bag, it has always been desirable to provide a bag with a strap. In the past, there were a number of different types of straps that were secured to the open end of the bag. However, there were a number of problems associated with the prior art straps. There were a number of problems in the past in maintaining the strap in a loop so that it could be secured to the top of the bag and provide a means to secure the closed top end of the bag to the strap. One of the problems in the past was that the closure member had to be positioned such that it was positioned so that it would not be contacted by the strap when it was being placed over the top of the bag. In some cases, this created a problem in the prior art because the closure member would come in contact with the strap when the closed top end of the bag was being moved over the strap to place the strap over the closed top end. In other cases, the strap
