Organizing your content A key to using Photoshop effectively is to start with a file that is well organized. It's easier to work with an image when it's organized, with specific layers, and grouped logically into folders. Organize a folder tree in Photoshop from the File menu, as shown in Figure 9-4. This feature is also accessed from the Photoshop toolbar:

- Choose Window⇒Browser to open the Browser window, shown in Figure 9-5.
- Click the Create folder button. A dialog box opens, prompting you to enter a folder name.
- Enter a name for your first folder and then click OK.

Figure 9-4: The File menu gives you easy access to all the folders in your project. Figure 9-5: You can open the Browser window to access the folder structure in your project and further organize and organize. Click Browse to locate the folder you've just created.

- Now click the Organize button on the far right side of the dialog box to open the Organize window, shown in Figure 9-6.
- In the Organize window, click the Folders tab.
- Click the folder icon next to Folders if you want to create new folders, or click the folder icon next to this folder if you want to create subfolders.
- In the Folders group, click the Create folder button.
- A dialog box opens that prompts you to enter a folder name.
- Enter a name for the new folder and click OK.
- Now you have created a new folder named Folders.

Figure 9-6: The Organize window keeps your folders clean and tidy.

Arrange your content After you first organize your content, you need to group it logically into layers. This arrangement makes Photoshop's editing capabilities much more efficient because you can add layers selectively to create your finished image with just one step. The default Photoshop document has a maximum of three layers (with the third being the background layer). To add a layer, follow these steps: 1. Open the Photoshop workspace by clicking the file tab. 2. Choose Window⇒View and select the Layers panel option from

Sen. Bernie Sanders Buttigieg stands in as Pence for Harris's debate practice Bernie Sanders warns of 'nightmare scenario' if Trump refuses election results Harris joins women's voter mobilization event also featuring Pelosi, Gloria Steinem, Jane Fonda MORE (I-Vt.) has won the endorsement of the International Longshoremen's and Warehouse Union (ILWU) as the Democratic presidential primary race inches closer to a contested convention in Philadelphia in July. "This evening, as the only union endorsed Bernie Sanders for president of the United States, we will caucus at the ILWU headquarters in San Francisco," Scott Mann, the president of the ILWU, said in a statement. "We will endorse Bernie Sanders for president and we urge the delegates to follow their conscience and give him the delegates and super delegates necessary to win on July 25." ADVERTISEMENT Mann announced the decision Thursday evening during a meeting of the ILWU Local 10. "On behalf of the people, we endorse Senator Bernie Sanders for President," he said in the meeting. He added that the decision would be put to a vote of the union's delegates at the July 25 convention. "We ask them to vote with their conscience," Mann said of the delegates. Sanders, who has sought the endorsement of unions throughout his campaign, went to California this week to support labor's progressive wing. He spoke at a reception at the headquarters of the Service Employees International Union in Oakland and spoke to about 50 delegates who attended. In addition to the ILWU's decision, the International Brotherhood of Electrical Workers and United Federation of Teachers have backed Sanders. The Colorado-based AFL-CIO has also endorsed Sanders. Double-strand RNA interference against mammalian relaxin gene in the rat reproductive tract. In mammals, relaxin is an essential hormone, involved in the contraction of the female reproductive tract. The biological function of relaxin is mediated by its hormone receptor RXFP1 (relaxin family peptide receptor 1). To investigate the involvement of relaxin in pregnancy and embryo implantation, we here examined the function of relaxin in the rat uterus by using small interference RNA (siRNA). To achieve local, cell-type specific and persistent gene silencing, we generated vectors encoding siRNA targeting rat RXFP1 genes, and transferred them to the rat uterus.
